

SwiftShip Tracker

Use Case Scenario

Use Case Scenario:

Customers often face delays and confusion while booking, tracking, and managing parcel deliveries because they need to call support or use multiple applications. A conversational and centralized shipment tracking system can simplify this process by allowing customers to book parcels, get live tracking information, and manage deliveries in one place.

Objective:

A comprehensive **Parcel Management and Tracking Portal** that enables customers to book parcels, track delivery status, and manage shipments through an intuitive and user-friendly interface. Administrators can update parcel details, delivery timelines, locations, and status information to ensure transparent customer communication.

Student Outcomes:

Hands-on Experience with Salesforce Development: Students gain practical skills in configuring custom objects, automating business processes with Flows, creating fields, and managing CRM data.

Understanding of CRM Project Lifecycle: Students learn the complete end-to-end process from requirement gathering and system design to implementation, testing, and deployment.

Problem-Solving Skills: Students develop the ability to design a practical shipment management solution, troubleshoot configuration issues, and improve the customer tracking experience.

SwiftShip Tracker

Project Overview

Problem Statement

Traditional parcel tracking can involve manual record keeping, repeated customer calls, and limited visibility into shipment movement. SwiftShip Tracker addresses these issues by providing a centralized platform for shipment creation, tracking, status updates, and delivery management.

Key Objectives

- Provide a unique tracking ID for every shipment.
- Allow customers to view shipment status and current location.
- Allow administrators to create and update shipment records.
- Maintain shipment history for transparent tracking.
- Reduce manual work and improve customer communication.

System Architecture

Core Modules

- 1. Customer Module:** Registration, login, tracking, and viewing delivery information.
- 2. Shipment Module:** Create, update, search, and manage shipment records.
- 3. Tracking Module:** Display current location, status, history, and expected delivery.
- 4. Admin Module:** Manage shipments, users, locations, and status information.

SwiftShip Tracker

Tracking Process

Shipment Tracking Flow

Example Shipment

Field	Sample Value
Tracking ID	SST202610001
Sender	ABC Electronics
Receiver	Customer
Pickup Location	Chennai
Current Location	Salem Distribution Hub
Destination	Coimbatore
Status	In Transit
Expected Delivery	06 October 2026

Tracking History

Date	Location	Status
------	----------	--------

03 Oct 2026	Chennai	Shipment Picked Up
03 Oct 2026	Chennai Hub	Dispatched
04 Oct 2026	Salem	Arrived at Distribution Hub
05 Oct 2026	Salem → Coimbatore	In Transit
06 Oct 2026	Coimbatore	Expected Delivery

SwiftShip Tracker

Technology, Outcomes & Future Scope

Technology Stack

Layer	Technology
Frontend	HTML, CSS, JavaScript / React
Backend	Node.js + Express.js
Database	MongoDB
API	REST API
Authentication	JWT
Development Tool	Visual Studio Code

Advantages

- Faster access to shipment information.
- Centralized shipment records.
- Easy status and location updates.
- Better customer communication.
- Reduced manual work.

Future Enhancements

- Real-time GPS and map integration.
- SMS and email notifications.
- QR-code based shipment tracking.
- Delivery-agent mobile application.
- AI-based delivery-time prediction.
- Shipment analytics and reports.

Conclusion

SwiftShip Tracker provides a practical and user-friendly solution for parcel management and tracking. It connects shipment information, tracking status, and delivery history in one centralized system. The project also provides students with practical experience in CRM configuration, automation, database management, and application development.

Project Title: Swift Ship Tracker

Domain: Logistics / Parcel Management

Academic Year: 2026–2027
